Khimunin GB0-381-ENU Exam Real Questions, H3C GB0-381-ENU exam training materials & Practice Engine.

NEW QUESTION: 1

You are trying to optimize a SyncIQ job between two five node clusters. What value should you set in the Workers Per Node setting?

- A. 0
- B. 1

- C. 2
- D. 3
- E. 4

Answer: C

NEW QUESTION: 2

While investigating alerts in the Analyzer you notice a host desktop with a low risk score has been sending regular emails from an internal account to the same external account. Upon investigation you see that the emails all have attachments. Would this be correct assessment of the situation? (Your next step should be to find what user account logs into this desktop, and look at activity of their devices this user has access to.)

- A. No
- B. Yes

Answer: A

NEW QUESTION: 3

Bei der Prüfung eines Webservers sollte sich ein IS-Prüfer über das Risiko Gedanken machen, dass Personen unberechtigten Zugriff auf vertrauliche Informationen erhalten, indem er:

- A. Applets.
- B. CGI-Skripte (Common Gateway Interface).
- C. Enterprise Java Beans (EJBs).
- D. Webdienste.

Answer: B

Explanation:

Erläuterung:

CGI-Skripte (Common Gateway Interface) sind ausführbare maschinenunabhängige Softwareprogramme auf dem Server, die von einer Webserverseite aufgerufen und ausgeführt werden können. CGI führt bestimmte Aufgaben aus, z. B. die Verarbeitung von Eingaben von Clients. Die Verwendung von CGI-Skripten muss evaluiert werden, da ein Fehler auf dem Server dazu führen kann, dass ein Benutzer nicht autorisierten Zugriff auf den Server und von dort Zugriff auf das Netzwerk des Unternehmens erhält. Applets sind Programme, die von einem Webserver heruntergeladen und in Webbrowsern auf Client-Computern ausgeführt werden, um webbasierte Anwendungen auszuführen. Enterprise Java Beans (EJBs) und Webservices müssen vom Webserveradministrator bereitgestellt werden und werden vom Anwendungsserver gesteuert. Ihre Ausführung erfordert die Kenntnis der Parameter und der erwarteten Rückgabewerte.

NEW QUESTION: 4

The net present value (NPV) of a project has been calculated to be \$215,000. Which one of the following changes in assumptions would decrease the NPV?

- A. Decrease the estimated effective income tax rate.
- B. Increase the estimated salvage value.
- C. Extend the project life and associated cash inflows.
- D. Increase the discount rate.

Answer: D

Explanation:

Choice "d" is correct. An increase in the discount rate will decrease the present value of future cash inflows and, therefore, decrease the net present value of the project. Each of the other options would increase the NPV: Choice "a" is incorrect. A decrease in the estimated effective income tax rate will reduce the depreciation tax shield and therefore increase the cash inflow. A larger cash inflow in the future will increase the present value of the cash inflows and therefore increase the net present value of the project. Choice "b" is incorrect. Increasing the project life and associated cash inflows will increase the present value of the cash inflows and therefore increase the net present value. Choice "c" is incorrect. An increase in the estimated salvage value will decrease the present value of the cash outflow and therefore increase the net present value.
