Make sure that you are preparing yourself for the AIWMI CIFM test with our practice test software as it will help you get a clear idea of the real CIFM exam scenario.

NEW QUESTION: 1
You have an SQL Server 2014 server named SQL1. You are designing a performance monitoring solution.
You need to monitor the following events on SQL1:
A deadlock graph
Missing column statistics
CPU performance statistics
A batch of completed Transact-SQL statements
Which two tools should you use? Each correct answer presents a complete solution.
A. dynamic management views
B. Database Engine Tuning Advisor
C. Activity Monitor
D. SQL Server Profiler
E. Data Profile Viewer
Answer: B,D
Explanation:
B: Database Engine Tuning Advisor examines how queries are processed in the databases you specify.
When you run a Profiler Trace and feed it to the Database Engine Tuning Advisor, it also looks for missing column statistics, and it can automatically create them for you. C: Use SQL Server Profiler to identify the cause of a deadlock. A deadlock occurs when there is a cyclic dependency between two or more threads, or processes, for some set of resources within SQL Server. Using SQL Server Profiler, you can create a trace that records, replays, and displays deadlock events for analysis.

NEW QUESTION: 2

A. Option D
B. Option C
C. Option B
D. Option A
Answer: A

NEW QUESTION: 3

You are a project manager implementing a Microsoft Dynamics solution.
The customer business processes are not complex, and a business process mapping is not
required.
You need to select the appropriate project type for this customer.
Which project type should you choose?

A. enterprise
B. agile
C. rapid
D. standard

Answer: C

Explanation:
Rapid Implementation: an accelerated approach for implementing Microsoft Dynamics with minimal or no customizations. This can be used in situations characterized by a limited scope where the basic application features are desired, and/or where the large majority of the customer's business processes are not considered as complex.
