If candidates are going to buy NCSC-Level-2 test dumps, they may consider the problem of the fund safety, Once we update the questions, then you will get the new questions with free.

Our NCSC-Level-2 practice prep is so popular and famous for it has the advantage that it can help students improve their test scores by improving their learning efficiency.

So our NCSC-Level-2 exam questions mean more intellectual choice than other practice materials, In short, our NCSC-Level-2 training material is able to instruct you to step forward as long as you practice on our NCSC-Level-2 test engine.

After all, NCSC-Level-2 exam preparation files are the authoritative exams to testify the professional knowledge and work ability of examinees, And to keep up with the pace of it, it is [Sample SCMA-WH Questions Pdf](#) necessary to improve ourselves with necessary certificates such Nutanix certification.

Having a good command of NCSC-Level-2 valid prep torrent is inevitable and the demand of the times, All of our staff is highly passionate about their work, Our new NCSC-Level-2 certification training materials are on line more than ten years, our NCSC-Level-2 study guide of good product quality and after-sales service, the vast number of users has been very well received.

NEW QUESTION: 1

For this question, refer to the Dress4Win case study. Dress4Win has configured a new uptime check with Google Stackdriver for several of their legacy services. The Stackdriver dashboard is not reporting the services as

healthy. What should they do?

A. Install the Stackdriver agent on all of the legacy web servers.

B. In the Cloud Platform Console download the list of the uptime servers' IP addresses and create an inbound firewall rule

C. Configure their legacy web servers to allow requests that contain user-Agent HTTP header when the value matches GoogleStackdriverMonitoring-UptimeChecks (<https://cloud.google.com/monitoring>)

D. Configure their load balancer to pass through the User-Agent HTTP header when the value matches GoogleStackdriverMonitoring-UptimeChecks (<https://cloud.google.com/monitoring>)

Answer: C

Explanation:

Topic 5, Dress4Win Case 2

Company Overview

Dress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model. The application has grown from a few servers in the founder's garage to several hundred servers and appliances in a collocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster. Dress4Win is committing to a full migration to a public cloud.

Solution Concept

For the first phase of their migration to the cloud, Dress4win is moving their development and test environments. They are also building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them.

Existing Technical Environment

The Dress4win application is served out of a single data center location. All servers run Ubuntu LTS v16.04.

Databases:

MySQL. 1 server for user data, inventory, static data:

- MySQL 5.8
- 8 core CPUs
- 128 GB of RAM
- 2x 5 TB HDD (RAID 1)

Redis 3 server cluster for metadata, social graph, caching.

Each server is:

- Redis 3.2
- 4 core CPUs
- 32GB of RAM

Compute:

40 Web Application servers providing micro-services based APIs and static content.

- Tomcat - Java
- Nginx
- 4 core CPUs
- 32 GB of RAM

20 Apache Hadoop/Spark servers:

- Data analysis
- Real-time trending calculations
- 8 core CPUs
- 128 GB of RAM
- 4x 5 TB HDD (RAID 1)

3 RabbitMQ servers for messaging, social notifications, and events:

- 8 core CPUs
- 32GB of RAM

Miscellaneous servers:

- Jenkins, monitoring, bastion hosts, security scanners
- 8 core CPUs
- 32GB of RAM

Storage appliances:

iSCSI for VM hosts

Fiber channel SAN - MySQL databases

- 1 PB total storage; 400 TB available

NAS - image storage, logs, backups

- 100 TB total storage; 35 TB available

Business Requirements

Build a reliable and reproducible environment with scaled parity of production.

Improve security by defining and adhering to a set of security and Identity and Access Management (IAM) best practices for cloud.

Improve business agility and speed of innovation through rapid provisioning of new resources.

Analyze and optimize architecture for performance in the cloud.

Technical Requirements

Easily create non-production environment in the cloud.

Implement an automation framework for provisioning resources in cloud.

Implement a continuous deployment process for deploying applications to the on-premises datacenter or cloud.

Support failover of the production environment to cloud during an emergency.

Encrypt data on the wire and at rest.

Support multiple private connections between the production data center and cloud environment.

Executive Statement

Our investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a competitor could use a public cloud platform to offset their up-front investment and free them to focus on developing better features. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of

our capacity is sitting idle.

Our capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years for a public cloud strategy achieves a cost reduction between 30% and 50% over our current model.

NEW QUESTION: 2

The component (s) that FI uses to connect to Finacle CORE is/are

- A. Config service and finlistval
- B. Only finlistval
- C. Finlistval and coresession
- D. Only coresession

Answer: C

NEW QUESTION: 3

A technician needs to routinely run scripting commands in Linux but does not want to walk over the server room every time to perform the task. The technician also travels between buildings and has a Windows 10 laptop with 4GB of memory and a fully partitioned 500GB hard drive. Which of the following steps should the technician take to resolve this issue? (Choose two.)

- A. Install a Linux guest VM.
- B. Increase the memory to 8GB.
- C. Create a Linux LiveBoot CD.
- D. Add another 500GB hard drive.
- E. Install Linux on a new ext3 partition.
- F. Repartition the hard drive.

Answer: E,F
