NEW QUESTION: 1
Which choice below is the correct definition of a Mutual Aid
Agreement?
A. A prearranged agreement to render assistance to the parties
of the agreement
B. An appraisal or determination of the effects of a disaster
on human, physical, economic, and natural resources
C. A management-level analysis that identifies the impact of
losing an entitys resources
D. Activities taken to eliminate or reduce the degree of risk
to life and property
Answer: A
Explanation:
Amutual aid agreement is used by two or more parties to provide
for assistance if one of the parties experiences an emergency.
It is
expected that the other parties will assist the affected party
in various
ways, perhaps by making office space available, or computing
time or resources, or supplying manpower if needed. While
mutual
aid agreements may be a very cost-effective solution for
disaster
recovery, it does not provide for full operations redundancy.
An
example of a problem with a total reliance on mutual aid would
be
the event that affects all parties to the agreement, thereby
rendering
the agreement useless. While they are an effective means to
provide
some resources to the organization in an emergency, they in
themselves
are not a replacement for a full disaster recovery plan,
including
alternate computer processing sites.
*Answer "A management-level analysis that identifies the impact
of losing an entitys resources"
describes a business continuity plan.
*Answer "An appraisal or determination of the effects of a
disaster on human, physical, economic,
and natural resources" describes a damage assessment
*answer "Activities taken to eliminate or reduce the degree of
risk to life and property" describes
risk mitigation.
