**Answer :**

Explanation:  
See solution below.

- Explanation
- Step 1: In the Azure portal, click All services. In the list of resources, type Storage Accounts. As you begin typing, the list filters based on your input. Select Storage Accounts.
  - Step 2: On the Storage Accounts window that appears, choose Add.
  - Step 3: Select the subscription in which to create the storage account.
  - Step 4: Under the Resource group field, select

corpdatalod8548984.

Step 5: Enter a name for your storage account:

corpdata8548984n1

Step 6: For Account kind select: General-purpose v2 accounts (recommended for most scenarios) General-purpose v2 accounts is recommended for most scenarios. General-purpose v2 accounts deliver the lowest per-gigabyte capacity prices for Azure Storage, as well as industry-competitive transaction prices.

Step 7: For replication select: Read-access geo-redundant storage (RA-GRS) Read-access geo-redundant storage (RA-GRS) maximizes availability for your storage account. RA-GRS provides read-only access to the data in the secondary location, in addition to geo-replication across two regions.

**NEW QUESTION: 3**

A storage account is configured with Read Access Geo-Redundant Storage (RA-GRS). The account is located in the East US region. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region.

The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region.

A. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region.

B. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region.

C. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region.

D. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region. The account is configured with a secondary location in the West US region.

**Answer: A**

**NEW QUESTION: 4**

Refer to the exhibit:

The exhibit shows a Cisco NX-OS switch configuration and an Ansible playbook, and the output of running this playbook. The playbook failed due to error "msg" "Request failed &lt;urlopen error [Errno 61] Connection refused&gt;" \ 'status\* -1 "url" "http://192.168.251.129:80/ins" Which Cisco NX-OS configuration command resolves this failure?

- A. http-server enabled
- B. feature http
- C. feature nxapi
- D. interface mgmt0; ip access-group allow\_http\_traffic in

**Answer: D**
