Answer: A,D

NEW QUESTION: 2
Refer to Scenario 3.
A US company has deployed web services within a private cloud.
They wish to provide additional web services elastically and
distribute them around the globe using a public cloud provider.
The web services have a dependency on a database resource in
the private cloud. The web services are deployed through a
service catalog as a standardized service offering, which
includes an intrusion prevention system that periodically polls
a central management server for security updates. The IPS
management server is located within the private cloud.
The web services collect highly regulated personal health
information about consumers who are located around the world.
What would be the best solution for protecting the personal
health information collected in the web service?
A. Transmit and store the data in an encrypted format. Locate
the database in the private cloud. Ensure that the database
server complies with HIPAA regulations.
B. Locate the database in the private cloud. Ensure that the
database server complies with FERPA regulations.
C. Store the data on each web server in an encrypted format.
Audit for different compliance rules depending on geographical
location of the web service.
D. Store the data on each web server in an encrypted format.
Ensure HIPAA compliance across all geographical locations.
Answer: B

NEW QUESTION: 3
