The leading benefit of using latest Braindumps Designing and Implementing Microsoft Azure Networking Solutions computer based training along with interactive AZ-700 bootcamps online is that you can easily retrieve Interactive software at any time anywhere as it is a perfect combination for AZ-700

computer based training preparation.

If so, our system will immediately send these [AZ-700 Designing and Implementing Microsoft Azure Networking Solutions](#) exam practice torrent to your email, which is done automatically, So you will gain confidence and be able to repeat [Designing and Implementing Microsoft Azure Networking Solutions](#) your experience in the actual test to help you to pass the exam successfully.

AZ-700 Practice Materials: Designing and Implementing Microsoft Azure Networking Solutions and AZ-700 Study Guide - Khimunin

Our former customers are convinced of these [Test C1000-128 Preparation](#) points, And the test engine on ITexamGuide.com will give you simulate the real exam environment, The principles of our AZ-700 practice materials can be expressed in words like clarity, correction and completeness.

If just only one or two plates, the user will inevitably be tired in the process of learning on the memory and visual fatigue, and the AZ-700 study materials provided many study parts of the plates is good **AZ-700 Latest Dumps Questions** enough to arouse the enthusiasm of the user, allow the user to keep attention of highly concentrated.

The good chance will slip away if you still hesitate, You will never be disappointed for buying our AZ-700 exam questions, The system of our AZ-700 study materials is great.

And you must be familiar with Microsoft AZ-700 certification test, Many former customers are thankful for and appreciative of our AZ-700 exam materials.

If you still lack of confidence in preparing for your test, choosing our valid AZ-700 practice test questions will be a wise decision for you, it is also an economical method which is saving time, money and energy.

If you still have any misgivings, please just take it easy, we can understand you completely, but please enter into our website and download the free demo of Microsoft AZ-700 exam guide first before you make a decision.

NEW QUESTION: 1

DRAG DROP

You are a network administrator of an Active Directory domain named contoso.com.

You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the Web Server (IIS) server role installed.

Server1 will host a web site at URL https:

//secure.contoso.com. The application pool identity account of the web site will be set to a domain user account named AppPool1.

You need to identify the setspn.exe command that you must run to configure the appropriate Service Principal Name (SPN) for the web site.

What should you run?

To answer, drag the appropriate objects to the correct location. Each object may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Note:

* -s <SPN>

Adds the specified SPN for the computer, after verifying that no duplicates exist.

Usage: setspn -s SPN accountname

For example, to register SPN "http/daserver" for computer "daserver1":

```
setspn -S http/daserver daserver1
```

[http://technet.microsoft.com/en-us/library/cc731241\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc731241(v=ws.10).aspx)

Attn: with Windows 2008 option is -a but with Windows 2012 it started to show -s

Definition of an SPN

An SPN is the name by which a client uniquely identifies an instance of a service. If you install multiple instances of a service on computers throughout a forest, each service

instance must have its own SPN. A particular service instance can have multiple SPNs if

there are multiple names that clients might use for

authentication. For example, an SPN

always includes the name of the host computer on which the service instance is running.

Therefore, a service instance might register an SPN for each name or alias of its host.

Adding SPNs

To add an SPN, use the setspn -s service/namehostname command at a command

prompt, where service/name is the SPN that you want to add and hostname is the actual

host name of the computer object that you want to update. For example, if there is an

Active Directory domain controller with the host name

server1.contoso.com that requires an

SPN for the Lightweight Directory Access Protocol (LDAP), type setspn -s ldap/server1.contoso.com server1, and then press ENTER to add the SPN.

The HTTP service class

The HTTP service class differs from the HTTP protocol. Both the HTTP protocol and the HTTPS protocol use the HTTP service

class. The service class is the string that identifies the general class of service.
For example, the command may resemble the following command:
setspn -S HTTP/iis6server1. mydomain.com mydomain\appPool1
