NEW QUESTION: 2

In a motor vehicle lease, a mathematical progression showing how the periodic payment is derived, containing the following information:

- A.** All of the above
- B.** Itemization of other charges that are part of the periodic payment
- C.** Rent charge (the difference between the total of base payment over the lease term minus the depreciation and any amortized amounts)
- D.** Gross capitalized cost (including the agreed-on value of the vehicle)

Answer: A

NEW QUESTION: 3

What control detects transmission errors by appending calculated bits onto the end of each segment of data?

- A.** Reasonableness check
- B.** Check digits
- C.** Redundancy check
- D.** Parity check

Answer: C

Explanation:

Explanation/Reference:

Explanation:

A redundancy check detects transmission errors by appending calculated bits onto the end of each segment of data. A reasonableness check compares data to predefined reasonability limits or occurrence rates established for the data. A parity check is a hardware control that detects data errors when data are read from one computer to another, from memory or during transmission.

Check digits detect transposition and transcription errors.

NEW QUESTION: 4

Which characteristics BEST describe a walkthrough?

- A. Formal process collects metrics
- B. Documented, includes peers and experts
- C. Defined roles, led by trained moderator
- D. Led by the author, may be documented

Answer: D
