- A. MD5ãf•ãffã, .ãf¥ã•"ã•-ã•|
- B. å¹³æ-†ã•"ã•-ã•|
- C. ã, ç¼¼, ñãf-7ã•"ã•-ã•|
- D. ã, ç¼¼, ñãf-0ã•"ã•-ã•|

Answer: A

NEW QUESTION: 3

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and

Server2 that run Windows Server 2016.

Server1 has IP Address Management (IPAM) installed. Server2 has Microsoft System Center 2016 Virtual Machine Manager (VMM) installed.

You need to integrate IPAM and VMM.

Which types of objects should you create on each server? To answer, drag the appropriate object types to the correct servers. Each object type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation

Server 1 (IPAM): Access Policy

VMM must be granted permission to view and modify IP address space in IPAM, and to perform remote management of the IPAM server. VMM uses a "Run As" account to provide these permissions to the IPAM network service plugin. The "Run As" account must be configured with appropriate permission on the IPAM server.

To assign permissions to the VMM user account

In the IPAM server console, in the upper navigation pane, click ACCESS CONTROL, right-click Access Policies in the lower navigation pane, and then click Add AccessPolicy.

Etc.

Server 2 (VMM) #1: Network Service

Server 2 (VMM) #2: Run As Account

Perform the following procedure using the System Center VMM console.

To configure VMM (see step 1-3, step 6-7)

Etc.

NEW QUESTION: 4

Which files will you need to perform a full recovery of a database backed up in NOARCHIVELOG mode?

(Choose all that apply.)

A. Online redo logs

B. Archived redo logs

C. Control files

D. Flashback logs

E. Database datafiles

Answer: A,C,E

Explanation:

Explanation/Reference:

Explanation:

Recovering a Database in NOARCHIVELOG Mode

1. Restore all the data files and control files
2. (optional) if the media failure is not fixed, you need to modify the control file to the new location of data files and redo log files.

```
SQL> STARTUP MOUNT;
```

```
SQL> ALTER DATABASE RENAME FILE '<damaged file, datafile, redo log>' TO '<new location>';
```

3. SQL> RECOVER DATABASE UNTIL CANCEL Because online redo logs are never backed up, you cannot restore them with the data files and control files. To enable the database to reset the online redo logs, you must first mimic incomplete recovery:

```
4. SQL> ALTER DATABASE OPEN RESETLOGS;
```
