Answer: A,B,C

Explanation:

Explanation/Reference:

true.

NEW QUESTION: 3

Several users report to the administrator that they are having issues downloading files from the file server. Which of the following assessment tools can be used to determine if there is an issue with the file server?

A. Recovery agent

B. Access list

C. MAC filter list

D. Baselines

Answer: D

Explanation:

The standard configuration on a server is known as the baseline. In this question, we can see if anything has changed on the file server by comparing its current configuration with the baseline. The IT baseline protection approach is a methodology to identify and implement computer security measures in an organization. The aim is the achievement of an adequate and appropriate level of security for IT systems. This is known as a baseline. A baseline report compares the current status of network systems in terms of security updates, performance or other metrics to a predefined set of standards (the baseline).
