NEW QUESTION: 1

A recent overview of the network's security and storage applications reveals a large amount of data that needs to be isolated for security reasons. Below are the critical applications and devices configured on the network:

- * Firewall
- * Core switches
- * RM server
- * Virtual environment
- * NAC solution

The security manager also wants data from all critical applications to be aggregated to correlate events from multiple sources. Which of the following must be configured in certain applications to help ensure data aggregation and data isolation are implemented on the critical applications and devices? (Select TWO).

- A. Port aggregation
- B. Log forwarding
- C. Zones
- D. Routing tables
- E. NIC teaming
- F. Data remnants

Answer: B,C

NEW QUESTION: 2

An existing client comes to you and says that he has heard that launching instances into a VPC (virtual private cloud) is a better strategy than launching instances into a EC2-classic which he knows is what you currently do. You suspect that he is correct and he has asked you to do some research about this and get back to him. Which of the following statements is true in regards to what ability launching your instances into a VPC instead of EC2-Classic gives you?

- A. All of the things listed here.
- B. Define network interfaces, and attach one or more network interfaces to your instances
- C. Change security group membership for your instances while they're running
- D. Assign static private IP addresses to your instances that persist across starts and stops

Answer: A

Explanation:

By launching your instances into a VPC instead of EC2-Classic, you gain the ability to:

Assign static private IP addresses to your instances that persist across starts and stops

Assign multiple IP addresses to your instances

Define network interfaces, and attach one or more network

interfaces to your instances

Change security group membership for your instances while they're running

Control the outbound traffic from your instances (egress filtering) in addition to controlling the inbound traffic to them (ingress filtering)

Add an additional layer of access control to your instances in the form of network access control lists (ACL)

Run your instances on single-tenant hardware
