NEW QUESTION: 4

Your company has a main office and a branch office. The branch office contains a read-only domain controller named RODC1.

You need to ensure that a user named Admin1 can install updates on RODC1. The solution must prevent Admin1 from logging on to

other domain controllers.

What should you do?

- A. Run dsmsgmt.exe and use the Local Roles option.
- B. Run ntdsutil.exe and use the Roles option.
- C. From Active Directory Sites and Services, modify the NTDS Site Settings.
- D. From Active Directory Users and Computers, add the user to the Server Operators group.

Answer: A

Explanation:

RODC: USING THE DSMGMT.EXE UTILITY TO MANAGE LOCAL ADMINISTRATORS

One of the benefits of RODC is that you can add local administrators who do not have full access to the domain administration.

This gives them the ability to manage the server but not add or change active directory objects unless those roles are delegated.

Adding this type of user is done using the dsmdmt.exe utility at the command prompt.

The following graphic shows a few commands including:

Remember, an RODC does not have all of the capabilities of a writeable domain controller. Consequently, an RODC cannot serve as the global catalog, operations masters, or bridgehead server.
