NEW QUESTION: 2

Your company has an Active Directory domain. You install an Enterprise Root certification authority (CA) on a member server named Server1.

You need to ensure that only the Security Manager is authorized to revoke certificates that are supplied by Server1.

What should you do?

- A. Assign the Allow - Issue and Manage Certificates permission to only the Security Manager user account.
- B. Assign the Allow - Manage CA permission to only the Security

Manager user account.

C. Remove the Request Certificates permission from the Authenticated Users group.

D. Remove the Request Certificates permission from the Domain Users group.

Answer: A

Explanation:

The Allow - Issue and Manage Certificates permission is the only one that will allow a user to issue, approve or revoke certificates. The Allow - Manage CA permission will grant the user ability to configure CA settings, but not to handle certificate requests.

The Request Certificates permission is not required or used for revoking certificates.
